

## Solid-Strip

*Product Number: 893*

*(Available in gallons only)*

### What does Gemini Solid-Strip do?

Gemini Solid-Strip is designed for industrial strength stripping. It will remove heavy coated finishes and is ideal for solid color stains, water-based and latex paints. Use Gemini Solid-Strip on decks, logs, or any wood surface that needs restoring. *(For 100% acrylic water-based products, use a conventional paint stripper)*

### Features:

- Prepares wood surface for any type of re-coating
- Removes weathered stains and wood sealers
- Removes oil, latex and water-based finishes
- Tackles the tough stripping jobs
- Easy application and removal

### Surface Preparation:

#### **Easy 3 Step Application Process:**

1. Pre-wet and cover the surrounding work area and vegetation to ensure no damage occurs. Apply Solid-Strip liberally to wood surfaces *(always test a small inconspicuous area to see if the desired result will be achieved)*. Best application results are with a [TWP® Deck Sprayer](#), although a brush or roller can also be used.
2. Solid-Strip should sit for a minimum of 15 minutes, however, do not allow product to dry. After sitting you may begin to scrub. When scrubbing applied area, use synthetic, stiff bristle brush *(do not use a wire or natural bristle brush)*.
3. Rinse thoroughly with hose or pressure washer. A pressure washer will show the best results, however, do not exceed 1000 P.S.I.
  - If not used properly a pressure washer may damage wood.
  - Do not allow product to dry. If stubborn areas persist, re-apply Solid-Strip and follow steps 2 and 3.

- Wood may darken after stripping. Use Gemini's Wood Brightener for Cedar and Redwood to revive color.

**NOTE: Use caution when working with Solid-Strip, wet surfaces will be slippery. See label for precaution statement.**

**Coverage Rate: Approximately 100-200 square feet per gallon.**
