

ENERGY SEAL

Log Home Sealant for Milled and Scribed Log Homes

Since it was introduced, Energy Seal has become one of the most popular members of our sealants. Energy Seal, was created specifically to seal milled or scribed log homes. One application makes any log wall completely weather-tight.

Energy Seal has excellent adhesion and stretch. It is long-lasting, UV-stable and chemical-resistant.

Unlike commonly used sealants, which look shiny and artificial, Energy Seal is textured to match the visual characteristics of wood. It easily tools to a smooth, professional finish, virtually disappearing into the walls after it's applied. It softens the lines on log walls and accepts the color of wood finishes. In fact, Energy Seal so closely matches your walls, most people can't tell the seams are sealed.

Application can be done by the homeowner or a professional contractor. We stock a full line of application accessories or can refer a professional applicator in your area.

Energy Seal Colors

Features and Statistics
